

NI USSD

Quick Facts

- NI USSD is available on all SA networks / handsets
- Developers API for easy integration
- A multitude of uses for any business in the financial sector
- End users (handsets) do not get billed for interacting with this service

Introduction

NI USSD or Network Initiated Unstructured Supplementary Service Data is a simple text menu solution allowing companies to push a USSD menu to a handset for users to interact by selection options from a menu or capturing free text responses.

This product is restricted to usage by Financial Service Providers for security, transaction or identity verification purposes only. We provide developers with an HTTP XML solution allowing for rapid deployment and custom integration.

Functions

NI USSD can be used for various functions including:

- Call Centre Authentication
- Internet Banking / ATM Transactions
- Website Protection
- Debit Card / Credit Card protection
- One Purchases (Card Not Present Transactions)

Our NI USSD Service simply works with HTTP and XML allowing developers to customize their own menu structure with ease. It is high speed interactive communication at it's best.
